

TMR4 ultra flex

Feel the flexibility

The Semperit TMR4 range has been one of the top products in the application of **oil return hoses** thanks to a special helix construction and thus a flexible and small bending radius. However, developments never stand still and market demand is trending in the direction of **even more flexible** hoses with a **lower bending radius**. Based on these targets and to fulfill our customers' expectations, Semperit introduces the new **TMR4 ultra flex**.

The new TMR4 ultra flex hose corresponds to all other TMR4 hoses in terms of accordance with **SAE J517 100/R4**. The main new feature is an even **smaller bending radius** (2x inner diameter) and a **reduced bending force** (on 2" approx. -20%). This important attribute represents a major deciding factor for the end user.

**SMALLER BENDING RADIUS (2X INNER DIAMETER)
REDUCED BENDING FORCE (ON 2" APPROX. -20%)**

Basic information:

At the beginning the TMR4 ultra flex will be offered in addition to our existing program and will be available on request only.

Dimension range: from 3/4" – 4".
Standard cover: SBR/EPDM, black, resistant to ozone and weather, abrasion resistant, limited resistant to oil, cloth impression
