

## Improving customer value by optimizing packaging

### New advanced coiler for Semperflex in Odry

Dear customer,

Read our exciting news about installing a **new coiling machine** at our production plant in Odry, Czech Republic. This forward-looking investment will ensure even **higher stability** and **uniformity** of the coils we produce for our Long Length hose portfolio. It will effectively **eliminate** potential failures such as **surface defects** and **missing labels**.

The new machine enables **precise coiling** of the long length hose into a **perfectly cylindrical** bundle. The resulting customer benefits include better **stackability** of the coils, **increased safety** during transport and storage, **improved space utilization** and generally a more appealing visual appearance. Together with the packaging foil, Semperit now offers its customers **state-of-the-art packaging**.

The **installation** and **start-up** of the new coiler was finalized in February 2023.

For further information please contact our technical or [customer service team](#).

With kind regards,

Peter Krapfenbauer  
Head of Commercial Semperflex Industrial

Falk Heitling  
Head of Global Product Management
