Digital Delivery on its Way

Semperit's new development for our customers to provide delivery aviso with detailed digital information for easy and improved inbound process

In today's times, the digital handling of information is brought more into the focus of all business interactions. Digital delivery refers to information being transferred as shipment aviso mail which **increases the efficiency** overall through **digital communication** among business partners.

As of **October 2022**, Semperit will provide all customers for their hose deliveries with:

Data prior to the arrival of the shipment for easier and faster inbound processes

Relevant **delivery data interlinked to article data, customer and Semperit order data** for improved process capability and traceability, i.e. for warehousing or invoice approval

Digitally processable data for universal data transfer independent from the customer's ERP or warehouse system

Article data with multiple usage options, i.e. as finding the right hose coil length for optimized cutting for reduced process costs along the supply chain

Information which is valid for **hydraulic and industrial hoses** ordered from our factories in Austria, Czech Republic, and Thailand

What's in for you:

- ✓ Faster inbound process
- ✓ Improved process ability
- ✓ Reduced process costs for you as our customer
- ✓ Improved traceability
- ✓ Reduced waste in cutting
- ✓ Full digital data availability for further process steps

Digital Delivery Note Process Description:

- > As soon as the delivery has left the production site, the Digital Delivery Note is sent as an automatic e-mail to a designated contact person of our customer.
- > Included in the Digital Delivery Note will be the customer order number, customer article number, pallet number, coil number and many more relevant delivery data as shown in the example below:

One example for improved inbound logistics:

- After shipment of goods the **Digital Delivery Note is sent automatically** per e-mail to customer before the goods arrive.
- The **Digital Delivery Note** includes relevant delivery information for identification such as **pallet number, coil ID** and many more data.
- Customer is enabled to transfer data from the Digital Delivery Note **into the own ERP / warehouse management system.**
- Each Semperit hose coil and pallet is labelled with an **identification number and barcode.**
- For **check in** of goods, **each pallet** can be identified via the pallet identification number or by **scanning** the barcode and uniquely **linked** to stored data from the ERP / warehouse management system.
